Human; thrombospondin-30; cytostatic; anti-HIV; antiinflammatory; malignant tumour; haemopathy; HIV infection; immunological disease; (BIOR-) BIOROAD GENE DEV LTD SHANGHAI. AAB99220 standard; protein; 272 AA 27-NOV-2000; 2000WO-CN000494. 29-NOV-1999; 99CN-00124148 (first entry) Human thrombospondin-30.

Human thrombospondin-30 and polynuclectide is useful in diagnosis and treatment of, e.g., malignant tumor, hemopathy, HIV infection, immunological diseases and various inflammatory diseases.

Claim 1; Page 27-28; 33pp; Chinese.

The present sequence is the protein sequence for human thrombospondin-30. Thrombospondin-30 protein and coding sequence are useful in the diagnosis and treatment of malignant tumour. haemopathy, HIV infection, immunological diseases and various inflammation diseases. In addition thrombospondin-30 protein may be used for screening mimics, agonists, antagonists or inhibitors, or for use in peptide fingerprinting identification. The thrombospondin-30 coding sequence may be used as primers for nucleic acid amplification reaction or as probes for hybridisation reaction, or in producing gene chips or microarrays

encoded polypeptides (AAMY8323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or get stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication

The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (STR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, embryonic stem cell, haematopoietic progenitor cell miltured using stem cell growth cell. The haematopoietic progenitor cell miltured using stem cell growth cell. The haematopoietic progenitor cell miltured using stem cell growth call. The haematopoietic progenitor cell miltured using stem cell growth call. The haematopoietic progenitor cell miltured using stem cell growth coll cactor-like proteins can replace as a graft for the bone marrow cord blood transplantation for treating a variety of diseases such as immunodeficiency syndrome, channed and miltips, conservation in a mucopolysaccone, agammaglobulinaemia, conservation as mucopolysacconeridosis, adrenal white matter can event as mucopolysacconeridosis, adrenal white matter can event of diseases and other neurodegenerative diseases, lromboortopaenia, immune deficiency are useful for treating diseases such as Parkinson's disease, Alzheimer's confissance and other neurodegenerative diseases, thromboortopaenia, immune deficiencies and disease such as multiple sclerosis, systemic cupus servithematosus, rheumatoid arthritis, and autoimmune disorders such as multiple sclerosis, systemic cupies miltiple manned and contained and publication and autoimmune publication arthritis, and autoimmune publication and publication and autoimmune publication and publication and publication and publication anature and publication and publication and publication and publica
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Human, stem cell growth factor-like protein, antiinflammatory; nootropic; neuroprotective; vulnerary; cytostatic; anticonvulsant; immunostimulant; vasotropic; virucide; dermatological; tranquilliser; cerebroprotective; osteopathic; immunodeficiency syndrome; fronic granulomatous disease; duplicated immunodeficiency syndrome; Miskott-Aldrich syndrome; AIDS; acquired immunodeficiency syndrome; agammaglobulinaemia; thalassaemia; Gaucher's disease; lysosomal storage disease; mucopolysaccharidosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The patent discloses novel stem cell growth factor-like proteins and polynucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell or germ cell which is preferably primordial germ cell, germ line stem cell, embryonic stem cell, haematopoietic stem cell, haematopoietic stem cell, in the haematopoietic progenitor cell, puripotent cell or totipotent factor-like proteins can replace as a graft for the bone marrow
                                                                                                                                                                                                                                                                                                                                                                                                          adrenal white matter degeneration; anaemia; neurodegenerative disease; Parkinson's disease; Alzheimer's disease; thrombocytopaenia; SCID; severe combined immunodeficiency; immune disorder; autoimmune disorder; multiple sclerosis; systemic lupus erythematosus; rheumatoid arthritis; autoimmune pulmonary inflammation; cancer; tumour; gene therapy; SCR-1; supporting factor for the proliferation of stem cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel stem cell growth factor like polypeptides and polynucleotides for identifying modulators useful for treating diseases such as Alzheimer's disease, cancer, rheumatoid arthritis, osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Drmanac RT;

diseases such as immunodeficiency syndrome, chronic granulomations diseases uch as immunodeficiency syndrome, adammaglobulinaemia, wiskott-Aldrich syndrome, adammaglobulinaemia, wiskott-Aldrich syndrome, acquired immuno deficiency syndrome agammaglobulinaemia, thalassaemia, haemolyric anaemia due to enzyme deficiency syndrome (AIDS), thalassaemia, haemolyric anaemia due to enzyme defect, congenital anaemia such as sickle cell anaemia, Gaucher's disease, lysosomal storage degeneration, a variety of cancer and tumours. Proteins of the invention are useful for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as severe combined immunodeficiency (SCID)) and autoimmune disorders such as multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune pulmonary inflammation. Sequences of the invention are also useful in gene therapy. The present sequence is stem cell growth factor-like protein from human

The invention relates to new stem cell growth factor-like polypeptides and polynucleotides. The stem cell growth factor-like polypeptides and polynucleotides are useful for inducing differentiation of embryonic and adult stem cells to give rise to different cell types, for treating e.g. cantile stem cells to generative diseases like Alzheimer's compared in the management of the polyneries are also useful for generating met tissues and organs that can applied transplanted tissues. The polynucleotides are useful as hybridisation probes, oligomers or primers for PCR, for chromosome and gene mapping, in recombinantly producing protein, in concombinantly producing protein, in comparating antisense DNA or RNA, in diagnostics as expressed sequence tags for identifying expressed genes, and for inducing immune response. The polypeptides are useful for generating antibodies that specifically bind the polypeptide, as molecular weight markers, and as a food supplement (e.g. protein or amino acid supplement, and as a carbon, nitrogen or carbohydrate source). Compositions comprising the current cor prevention of cancers, and other immunological disorders. The current expensence represents a human clone I thrombospondin protein
                                                                     useful
                                                                     New stem cell growth factor-like polypeptides and polynucleotides, use for treating e.g. leukemia, hemophilia and degenerative diseases like Alzheimer's disease, and for inducing immune response.
                                                                                                                                                                                   Disclosure, Fig 1; 151pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 272 AA;

The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem cells (SCR-1)) from mouse or human, or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polymucleotide encoding SCR-1 for its mature protein portion, or fragment, analogue, variant or SCR-1 polymucleotide, a most cell growth factor activity, or the complement of the polymucleotide, a most cell growth factor activity or the SCR-1 polymucleotide, a most cell growth a regulatory sequence of SCR-1 polymucleotide in operative association with a regulatory sequence CSCR-1 polymucleotide in operative association with a regulatory sequence comprising the SCR-1 polymucleotide (the polypeptide which is an proparation of the SCR-1 polymucleotide (the polypeptide which is an controls expression product of the SCR-1 polymucleotide (the polypeptide which is an control expression product of the SCR-1 polymucleotide (the polypeptide which is an activity to support progenitor cell, with a proviso that C-terminal as a collecting any 10 consecutive as from ABO44430, an isolated polypeptide or sequence does not comprise the as equence appearing as ABO44433 and ABO44430, an isolated polypeptide consintain survival of or promote proliferation of a stem cell or germ cell, an anti-SCR-1 antibody, a mucleic acid array comprising the SCR-1 polymucleotide or a unique segment of the SCR-1 polymucleotide or a unique segment of polypeptide attached to a surface, a stromal cell genetically engineered to express the SCR-1 polymucleotide or a unique segment of polypeptide attached to a surface, a stromal cell genetically engineered to express the SCR-1 polymous account in a management of the SCR-1 polymous or survival of a stem cell or germ cell and an implant comprising a cell companies attached to a surface, a stromal cell genetically engineered to express the SCR-1 polymous or survival of a stem cell or germ /note= "Mature stem cell growth factor-like protein. This protein is specifically claimed in claim 9° Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor epithelial cell growth; ovarian follicle development; nerve cell growth; cartilage remodeling; bone growth; immunosuppression; human. healing. The human haematopoietic stem cell or human haematopoietic progenitor cell culture using the SCR-1 polypeptide can replace as a graft for the conventional bone marrow transplantation or cord blood transplantation. The transplantation of haematopoietic stem cells can be employed as a therapy for treating diseases such as chronic granulomatous diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia, wiskott-Aldrich syndrome, ALDS, etc., thalassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia such as sicklaemia, Gaucher's disease etc. the SCR-1 polypeptide is useful for cell growth and morphogenesis, including tissue specific stem cell growth, epithelial cell growth, sustaining neuronal populations, cartilage remodeling, bone growth, and immunosuppression. The present sequence is a Human SCR-1
                                                                                                                                                                                                                                                                                                                                                                                   ö

The invention relates to an isolated stem cell growth factor-like polyperide (referred as supporting factor for proliferation of stem cells (SCR-1) from mouse or human, or its mature protein portion, or tragement, analogue, variant or carrivative, that retains stem cell growth factor activity. Also included are an isolated polymucleotide encoding SCR-1 (or its mature protein portion or fragement, analogue, variant or carrivative, that retains stem cell growth factor activity or the complement of the polymucleotide, a host cell growth factor activity or the complement of the polymucleotide, a host cell growth factor activity or the complement of the polymucleotide, a polypeptide or comprising the SCR-1 polymethed or carrivation with a regulatory sequence of the SCR-1 polymethed or all state of the polymucleotide in the host cell, preparation of the SCR-1 polymethed a polypeptide which is an activity to support proliferation or survival of hasmatopoietic stem cell corput factor cell, with a provise that cereminal and activity to support proliferation or survival of consecutive as from ABO44430, an isolated polypeptide will an exting any 10 consecutive as from ABO44430, an isolated polypeptide will an exting any 10 consecutive as from ABO44430, an isolated polypeptide will an extended some antended or a surface, as tromal engineers of cell or germ cell and an implant comprising the SCR-1 polymetleotide or a unique segment of the SCR-1 polymetleotide or a unique segment of the SCR-1 polymetleotide and an implant comprising the SCR-1 polymetleotide or aupport proliferation or centraling the SCR-1 polypeptide to support proliferation or survival of a stem cell or germ cell and an implant comprising or cell or germ cell and an implant comprising or cell or sprease the SCR-1 polypeptide to support proliferation or survival of a stem cell or germ cell and an implant or survival of a stem cell or germ cell and an implant or survival of a stem cell or germ cell and an implant or cell rangement or cell certain definition w
                                                                            Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor cells.
                                                                                                                                                                                                                                                                                                                                             Claim 23; Fig 3; 96pp; English.

The patent discloses movel stem cell growth factor-like proteins and compared to the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, emronic stem cell, parametopoietic stem cell, mbryonic stem cell, parametopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell pluripotent cell growth cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth care proteins can replace as a graft for the bone marrow cell growth cell seases such as immunodeficiency syndrome, chronic granulomatous diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia, wiskott-Aldrich syndrome, acquired immuno deficiency syndrome (hins), thatassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia cell seases such as mucopolysaccharidosis, adrenal white matter cell are assible cell anaemia diseases such as parkinson's diseases, Alzheimer's diseases con treating diseases such as Parkinson's disease, Alzheimer's diseases and tumours. Proteins of the invention of diseases such as Parkinson's disease, Alzheimer's diseases of Alzheimer's diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (SCID)) and autoimmune disorders such as multiple sclerosis, systemic upus erythematosus, theumatoid arthritis, and autoimmune pulmonary inflammation. Sequences of the invention are also useful in gene therapy. The present sequence is stem cell growth factor-like protein from human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       disease and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as severe combined immunodeficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 273 AA;

Human stem cell growth factor-like protein, SCR 1 #2. ABO44414 standard; protein; 273 AA. 30-SEP-2003 (first entry) RESULT 9 4B044414

The invention relates to an isolated stem cell growth factor-like polypeptide (Ireferred as supporting factor for proliferation of stem coll pypeptide (Ireferred as supporting) are not in solated polymerleding of factor activity. Also included are an isolated polymerleding stem cell growth factor activity, or the charvative, that retains stem cell growth factor activity, or the derivative, that retains stem cell growth factor activity, or the carpinal stem cell growth factor activity, or the campinal as the polymerledide, an (expression) vector comprising the SCR-1 polymerledide in operative association with a regulatory sequence that controls expression of the polymerledide with a regulatory sequence. SCR-1 polymerledide in operative association with a regulatory sequence that controls expression of the polymerledide (the polypeptide special polymerledide with stem coll or preparation of the SCR-1 polymerledide (the polypeptide special polypeptide with stem cell crowth factor cell, with a proviso that C-terminal as sequence does not comprise the as sequence appearing as ABG44438 and ABG44438 and ABG44438 and ABG44438 and ABG44438 and ABG44439, a culture medium comprising the SCR-1 polypeptide with stem cell growth factor activity having at least an as sequence appearing as ABG44438 and ABG44438 and ABG44439, a culture medium comprising the SCR-1 polypeptide to maintain survival of or promote proliferation of a stem cell or germ cell, an anti-SCR-1 antibody, a mucleic acid array comprising the SCR-1 polypeptide to support proliferation or survival of a stem cell or germ cell or Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor Claim 23; Page 72-73; 96pp; English. N-PSDB; ACH04325 241 121 Stem cell growth factor-like protein; antianemic; anti-HIV; SCR-1; immunostimulant; vulnerary; haematopoietic stem cell; gene therapy; supporting factor for proliferation of stem cells; wound healing; haematopoietic progenitor cell; stromal cell; AIDS; thalassaemia; bone marrow transplantation; cord blood transplantation; cord blood transplantation; cord blood transplantation; agammaglobulinemia; Wiskott-Aldrich syndrome; haemolytic anaemia; congenital anaemia; sicklaemia; Gaucher's disease; morphogenesis; epithelial cell growth; ovarian follicle development; nerve cell growth; cartilage remodeling; bone growth; immunosuppression; human.

The parent unscribes inversariant to the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell or germ cell which is preferably primordial germ cell, germ line stem cell, embryonic stem cell, haematopoietic stem cell, haematopoietic progenitor cell, pluripotent cell, nate to totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, cell or totipotent cell. The haematopoietic progenitor cell. The bone marrow factor-like proteins can replace as a graft for the bone marrow cell sease, duplicated immunodeficiency syndrome, chronic granulomatous disease, duplicated immunodeficiency syndrome, agammaglobulinaemia, wiskott-Aldrich syndrome, acquired immune deficiency syndrome (AIDS), wiskott-Aldrich syndrome, acquired immune deficiency syndrome (AIDS), wiskott-Aldrich syndrome, acquired immune deficiency syndrome (AIDS), cuch as sickle cell anaemia, Gaucher's disease, lysosomal storage chiseases such as mucopolysaccharidosis, adrenal white matter cell anaemia, daucher's disease, lysosomal storage deficiency avaiety of cancer and tumours. Proteins of the invention are useful for treating diseases such as severe combined immune deficiency contraction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180

healing. The human haematopoletic stem cell or human haematopoletic progenitor cell culture using the SCR-1 polypeptide can replace as a graft for the conventional bone marrow transplantation or cord blood transplantation. The transplantation of haematopoietic stem cells can be employed as a therapy for treating diseases such as chronic granulomatous diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia, Miskott-Ahdrich syndrome, AlDS, etc., thalassaemia, haemolyric anaemia due to enzyme defect, congenital anaemia such as sicklaemia, Gaucher's disease etc. the SCR-1 polypeptide is useful for cell growth and morphogenesis, including tissue specific stem cell growth, epithelial cell growth and regulation, ovarian follicle development, promoting nerve cell growth and immunosuppression. The present sequence is a protein homologous to Human SCR-1 protein

The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem cells (SCR-1)) from mouse or human, or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polymucleotide encoding SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the complement of the polymucleotide), an (expression) vector comprising the SCR-1 polymucleotide in host cell genetically engineered to contain the SCR-1 polymucleotide in operative association with a regulatory sequence SCR-1 polymucleotide in the host cell, the controls expression of the polymucleotide in the host cell, preparation of the SCR-1 polymucleotide (the polypeptide having an expression product of the SCR-1 polymucleotide (the polypeptide having an expression product of the SCR-1 polymucleotide (the polypeptide tem cell, vith a proviso that C-terminal as sequence does not comprise the as sequence appearing as ABO4443), an solated SCR-1 polypeptide with stem cell growth factor activity and cloaked SCR-1 polypeptide with stem cell growth factor activity and sequence appearing as ABO44428 and ABO44429, a culture medium comprising the SCR-1 polypeptide or a unique segment of the SCR-1 polypeptide or a unique segment of the SCR-1 polymucleotide or a stromal cell growth factor activity and cell or maintain survival of or promote proliferation of a stem cell or served to the screen of a stromal cell segment of the SCR-1 polymucleotide or a stromal cell served by served to surface, a stromal cell served by served by served to surface to served by served by serve engineered to express the SCR-1 polypeptide to support proliferation or survival of a stem cell or germ cell and an implant comprising a cell genetically engineered to express the SCR-1 polypeptide to support proliferation or survival of a stem cell or germ cell. The SCR-1 polypeptide is useful for identifying a compound that binds to the SCR-1 polypeptide and for maintaining survival of or promoting proliferation of a stem cell, a germ cell, a germ cell, a permention of progenitor cell, a germ cell, a polypeptide is useful for promoting wound 28-JUN-2000; 2000US-0215733P. 05-FEB-2001; 2001US-0266614P. 28-JUN-2001; 2001US-00894912. The patent discloses novel stem cell growth factor-like proteins and as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins of the invention are also known cell growth factor-like proteins are useful for supporting proliferation or cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, embryonic stem cell, germ cell, paramatopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth cell. The haematopoietic progenitor cell cultured using stem cell growth cell. The haematopoietic progenitor cell cultured using stem cell growth cell. The haematopoietic can replace as a graft for the bone marrow cord blood transplantation for treating a variety of disease such as immunodeficiency syndrome, agammaglobulinaemia.

Wiskott-Aldrich syndrome, acquired immune deficiency syndrome (hibS). thalassacmia, haemolytic anaemia due to enzyme defect, congenital anaemia cell seases such as miltiple solf manune cell storage diseases und a variety of cancer and tumours. Proteins of the invention cell sease and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as severe combined immunodeficiency collupus erythematosus, rheumatoid arthritis, and autoimmune disorders such as multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune such cell in gene therapy.

Che present sequence is human SCR-1 related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180

WO200177169-A2

protein;

```
The invention relates to human secreted or transmembrane protein (I), their fragments and is encoded by specific complementary decyribonucleic acid (cDNA) inserts (II), where the protein is substantially free from other mammalian proteins. (I) are useful for preventing, treating or prevention of tumoures. (I) exhibits activity relating to angiogenesis, cytokine, cell proliferation, cell differentiation, antiinflammatory, stem cell growth factor activity and activity and inhibin-related cytokines. (I) can be used to manipulate stem cells in culture to give crise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental damage or cells damaged by illness, autoimmune disease, accidental damage or genetic disorders. (I) induces the proliferation of neural cells and central and peripheral nervous system diseases and neuropathies, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis. (I) is involved in chemotactic or chemokinetic artifuctor regulation of haematopolesis and is useful for treating myeloid or lymphoid cell disorders, platelet disorders such as thrombocytopaenia
                                                                                                                                                                                                                                       Human; cytostatic; antirheumatic; antiarthritic; vulnerary; analgesic; antinflammatory; antibacterial; immunosuppressive; antiparkinsonian; meuroprotective; nootropic; osteopathic; haemostatic; vasotropic; antiulcer; fungicide; antidiabetic; antiasthmatic; antiallergic; immunostimulant; antiparasitic; secreted protein; transmembrane protein; cytokine; cell proliferation; cell differentiation; autoimmune disease; stem cell; growth factor; nervous system disease; neuropathy; Alzheimer's disease; neuropathy; osteoporosis; severe combined immunodeficiency; SCID; infection; multiple sclerosis; rheumatoid arthritis; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel secreted or transmembrane protein and polymucleotide encoding the protein, useful for diagnosis and treatment of neurological disorders, cancer, autoimmune diseases, bone disorders and lung or liver fibrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Evans C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Collins-Racie LA,

and for regeneration of bone, cartilage, tendon, ligament and/or nervetissue growth and in tissue repair, healing of burns, incisions, ulcers, for treating osteoprosis, osteoarthritis, bone degenerative disorders or periodontal disease. (1) is also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis, rheumatoid arthritis, diabetes mellitus, myasthenia gravis, allergic reactions and conditions, such as asthma or other respiratory problems. (II) is useful to express recombinant protein, as markers for tissues in which the corresponding protein is preferentially expressed and in gene therapy. New stem cell growth factor-like polypeptides and polynucleotides, useful for treating e.g. leukemia, hemophilia and degenerative diseases like Alzheimer's disease, and for inducing immune response.

Disclosure; Fig 2; 151pp; English.

The invention relates to new stem cell growth factor-like polypeptides and polynucleotides. The stem cell growth factor-like polypeptides and polynucleotides are useful for inducind differentiation of embryonic and adult stem cells to give rise to different cell types, for treating e.g. leukaemia, haemophilia and degenerating different cell types, for treating e.g. leukaemia, haemophilia and degenerating use tissues and organs that considers are also useful for generating new tissues and organs that may aid patients in need of transplanted tissues. The polynucleotides are useful as hybridisation probes, oligomers or primers for PCR, for chromosome and gene mapping, in recombinantly producing protein, in continuous and sense and for inducing immune response. The polypeptides are useful for generating antibodies that specifically chind the polypeptides are useful for generating antibodies that specifically chind the polypeptides as molecular weight markers, and as a food supplement (e.g. protein or amino acid supplement, and as a carbon, nitrogen or carbohydrate source). Compositions comprising the polypeptides or polymucleotides are useful for the diagnosis, treatment or prevention of cancers, and other immunological disorders. The current sequence represents a human secreted protein clone da_288_6
